**Pharmacokinetics**  
- What Body does to the drugs.

This refers to movement of drug in & alteration of a drug by body, includes absorption, distribution, binding/localization/ storage, biotransformation & excretion of drug.

\* 6.  
paracetamol is rapidly and almost completely absorbed orally attaining peak blood levels at 30-60 min. 25% bound to plasma proteins, widely and almost uniformly distributed in the body.  
Volume of distribution = 1L/kg; extensively metabolized in the liver, primarily by glucuronide and sulfate conjugation into inactive metabolites which are excreted in urine; has a plasma half life (t<sub>1/2</sub>) of 2-3 hours and a clearance value of 5 ml/kg/min.
